Abstract:

The Salesforce CRM implementation for automobile sales streamlines the entire sales process, enhancing efficiency and customer satisfaction. Through this system, sales teams can manage leads, track customer interactions, and automate follow-ups.

It enables comprehensive customer profiling, allowing for personalized marketing strategies and targeted campaigns. The platform facilitates inventory management, ensuring real-time updates on available vehicles and their specifications.

Integration with marketing tools enables seamless communication and lead nurturing. Additionally, the system provides insightful analytics, empowering decision-making by identifying sales trends and forecasting demand. Overall, the Salesforce CRM for automobile sales optimizes operations, fosters customer relationships, and drives revenue growth within the automotive industry.

Introduction:

Sales Automobile Using Salesforce CRM:

The Salesforce CRM implementation for automobile sales streamlines the entire sales process, enhancing efficiency and customer satisfaction. Through this system, sales teams can manage leads, track customer interactions, and automate follow-ups. It enables comprehensive customer profiling, allowing for personalized marketing strategies and targeted campaigns. The platform facilitates inventory management, ensuring real-time updates on available vehicles and their specifications. Integration with marketing tools enables seamless communication and lead nurturing. Additionally, the system provides insightful analytics, empowering decision-making by identifying sales trends and forecasting demand. Overall, the Salesforce CRM for automobile sales optimizes operations, fosters customer relationships, and drives revenue growth within the automotive industry.

Are you new to Salesforce? Not sure exactly what it is, or how to use it? Don't know where you should start on your learning journey? If you've answered yes to any of these questions, then you're in the right place. This module is for you. Welcome to Salesforce! Salesforce is game-changing technology, with a host of productivity-boosting features, that will help you sell smarter and faster. As you work toward your badge for this module, we'll take you through these features and answer the question, "What is Salesforce, anyway?".

What Is Salesforce?

Salesforce is your customer success platform, designed to help you sell, service,

market, analyze, and connect with your customers.

Salesforce has everything you need to run your business from anywhere. Using

standard products and features, you can manage relationships with prospects and

customers, collaborate and engage with employees and partners, and store your

data securely in the cloud.

So what does that really mean? Well, before Salesforce, your contacts, emails,

follow-up tasks, and prospective deals might have been organised something like

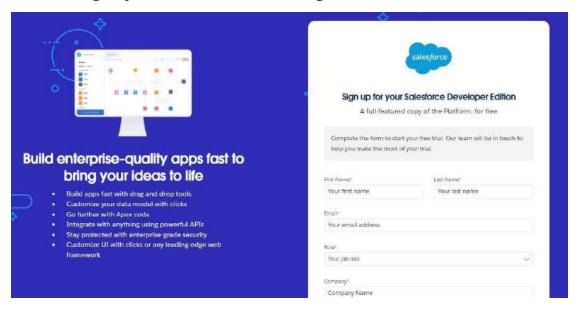

this:

https://youtu.be/r9EX31Gde5k

Creating Developer Account

Creating a developer org in salesforce.

- 1. Go to https://developer.salesforce.com/signup
- 2. On the sign up form, enter the following details:

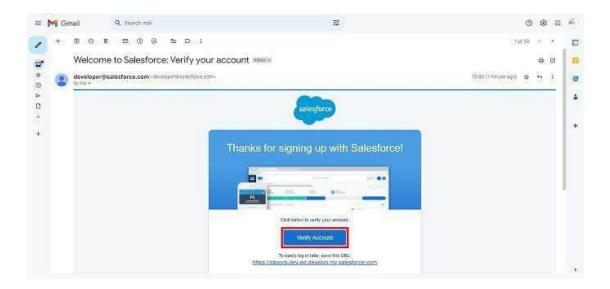

- 1. First name & Last name
- 2. Email
- 3. Role: Developer
- 4. Company: College Name
- 5. County: India
- 6. Postal Code: pin code
- 7. Username: should be a combination of your name and company

This need not be an actual email id, you can give anything in the format : username@organization.com

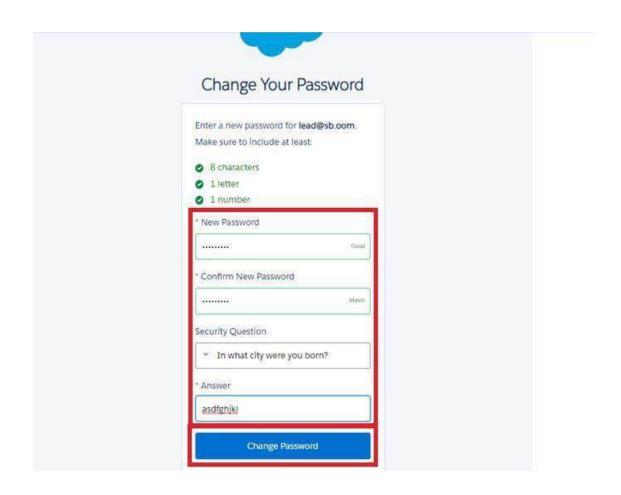

Click on sign me up after filling these.

Account Activation

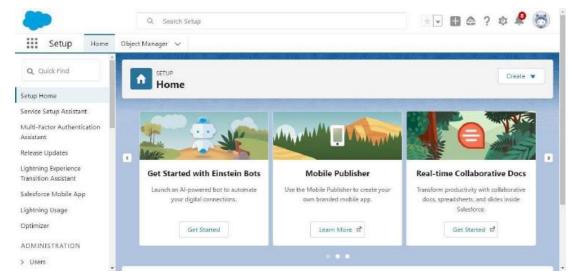

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

- 2. Click on Verify Account
- 3. Give a password and answer a security question and click on change password.

4. Then you will redirect to your salesforce setup page.

Object

What Is an Object?

Salesforce objects are database tables that permit you to store data that is specific to an organization. What are the types of Salesforce objects

Salesforce objects are of two types:

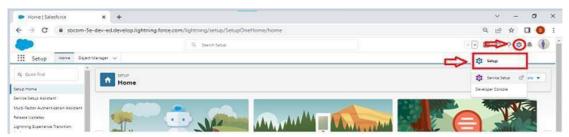

- 1. **Standard Objects**: Standard objects are the kind of objects that are provided by salesforce.com such as users, contracts, reports, dashboards, etc.
- 2. **Custom Objects**: Custom objects are those objects that are created by users. They supply information that is unique and essential to their organization. They are the heart of any application and provide a structure for sharing data.

Use Case:

Creating an object in Salesforce organization is essential for efficient data management and process automation. By defining custom objects, businesses can structure and store data specific to their needs, enabling streamlined workflows, personalized reporting, and enhanced user experiences. Objects serve as the foundation for organizing and leveraging critical information within Salesforce.

To Navigate to Setup page:

Click on gear icon >> click setup.

To create an object:

Tabs

What is Tab: A tab is like a user interface that is used to build records for objects and to view the records in the objects.

Types of Tabs:

1. Custom Tabs

Custom object tabs are the user interface for custom applications that you build in salesforce.com. They look and behave like standard salesforce.com tabs such as accounts, contacts, and opportunities.

2. Web Tabs

Web Tabs are custom tabs that display web content or applications embedded in the salesforce.com window. Web tabs make it easier for your users to quickly access content and applications they frequently use without leaving the salesforce.com application.

3. Visualforce Tabs

Visualforce Tabs are custom tabs that display a Visualforce page. Visualforce tabs look and behave like standard salesforce.com tabs such as accounts, contacts, and opportunities.

4. Lightning Component Tabs

Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app.

5. Lightning Page Tabs

Lightning Page Tabs let you add Lightning Pages to the mobile app navigation menu.

Lightning Page tabs don't work like other custom tabs. Once created, they don't show up on the All Tabs page when you click the Plus icon that appears to the right of your current tabs. Lightning Page tabs also don't show up in the Available Tabs list when you customize the tabs for your apps.

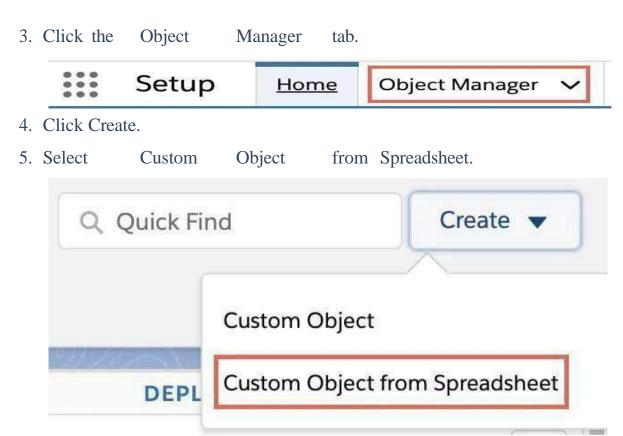

Use Case:

Creating Objects and storing organization's data is the very first step in the requirements they want. Now to access the stored data by an employee from the organization Admin needs to create Tabs. By designing a dedicated Tab, businesses can improve user experience, simplify navigation, and provide quick access to critical information, enhancing productivity and ensuring efficient utilization of Salesforce's capabilities.

Create Automobile Information Object

- 1. Download and open this spreadsheet, save it as AutomobileInformation.csv.
- 2. Make sure to download the File into CSV format.

Note: Make sure to have the name of the file as "Automobile Information". Log into your salesforce account, click , then select Setup.

- 6. Click Login With Salesforce.
- 7. Enter your Salesforce account username and password. (which you have created in the Milestone 1, Activity 1)
- 8. Click Log In.
- 9. Click Allow.
- 10. Click Upload.

11. Navigate to the Automobile Information.csv file you downloaded and upload it. Salesforce automatically detects the fields and populates all its record data. Choose the Record Name field and make sure all fields are with the proper datatypes as below as they are.

- 12. Click Next and enter the following settings.
- 13. Click Finish. The Automobile Information object is successfully created and data imported, all within minutes.

Create Invoice Object

Create Invoice object, just as we have created an Automobile Information Object using this sheet

Make sure to Download the File into CSV Format.

Note: Make sure you do field mapping with proper field type as shown below.

Create Automobile Object:

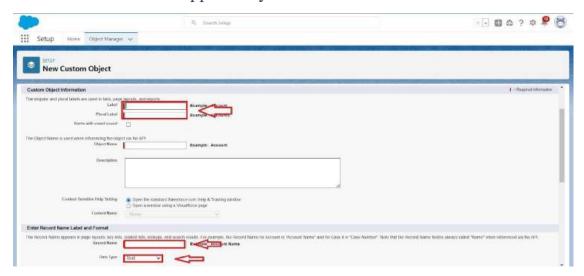

The purpose of creating an Automobile custom object is to store and manage information about Invoice.

To create an object:

 From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.

- 1. Enter the label name>> Opportunity Automobile
- 2. Plural label name>>Opportunity Automobiles

- 3. Enter Record Name Label and Format
- Record Name >> Opportunity Automobile Id
- Data Type >> Auto Number
- Display Format >> OA-{0000}
- Starting Number >> 1

Custom Object Information The singular and plural labels are used in tabs, page layouts, and reports. Be careful when changing the name or label as it may affect existing integrations and merge templates. Label Plural Label Plural Label Plural Label Opportunity Automobile Starts with vowel sound The Object Name is used when referencing the object via the API. Object Name Opportunity_Automobile Example: Account Description Context-Sensitive Help Setting Open the standard Salesforce.com Help & Training window Open a window using a Visualforce page Content Name Enter Record Name Label and Format The Record Name appears in page layouts, key lists, related lists, lookups, and search results. - 2. Click on Allow reports.
- 3. Allow search
- 4. Save.

Tabs

What is Tab: A tab is like a user interface that is used to build records for objects and to view the records in the objects.

Types of Tabs:

1. Custom Tabs

Custom object tabs are the user interface for custom applications that you build in salesforce.com. They look and behave like standard salesforce.com tabs such as accounts, contacts, and opportunities.

2. Web Tabs

Web Tabs are custom tabs that display web content or applications embedded in the salesforce.com window. Web tabs make it easier for your users to quickly access content and applications they frequently use without leaving the salesforce.com application.

3. Visualforce Tabs

Visualforce Tabs are custom tabs that display a Visualforce page. Visualforce tabs look and behave like standard salesforce.com tabs such as accounts, contacts, and opportunities.

4. Lightning Component Tabs

Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app.

5. Lightning Page Tabs

Lightning Page Tabs let you add Lightning Pages to the mobile app navigation menu.

Lightning Page tabs don't work like other custom tabs. Once created, they don't show up on the All Tabs page when you click the Plus icon that appears to the right of your current tabs. Lightning Page tabs also don't show up in the Available Tabs list when you customize the tabs for your apps.

Use Case:

Creating Objects and storing organization's data is the very first step in the requirements they want. Now to access the stored data by an employee from the organization Admin needs to create Tabs. By designing a dedicated Tab, businesses can improve user experience, simplify navigation, and provide quick access to critical information, enhancing productivity and ensuring efficient utilization of Salesforce's capabilities.

Creating A Custom Tab

1. Go to setup page >> type Tabs in Quick Find bar >> click on tabs >> New (under object tab) custom **Custom Tabs** You can create new custom tabs to extend Salesforce functionality or to build new application functionality. Custom Object tabs look and behave like the standard tabs provided with Salesforce. Web tabs allow you to embed exte allow you to embed Visualforce pages. Lightning Component tabs allow you to add Lightning components to the navigat you to add Lightning Pages to Lightning Experience and the mobile app **Custom Object Tabs** What Is This? New No Custom Object Tabs have been defined Web Tabs New What Is This? No Web Tabs have been defined

2. Select Object(Opportunity Automobile) >> Select any tab style >> Next (Add to profiles page) keep it as default >> Next (Add to Custom App) keep it as default >> Save.

Note: Tabs for Automobile Information & Invoice objects do get created automatically. We do not need to create tabs for those objects.

The Lightning App:

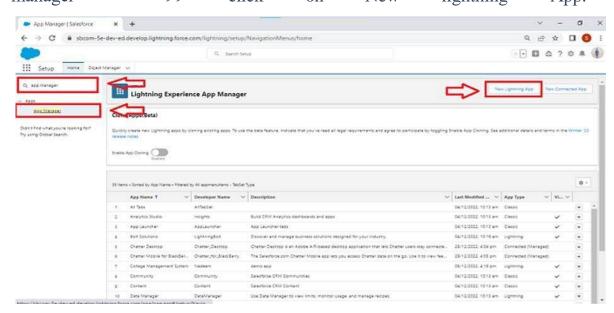

An app is a collection of items that work together to serve a particular function. In Lightning Experience, Lightning apps gives users access to sets of objects, tabs, and other items all in one convenient bundle in the navigation bar. Lightning apps let you brand your apps with a custom color and logo. You can even include a utility bar and Lightning page tabs in your Lightning app. Members of your org can work more efficiently by easily switching between apps.

Use Case:

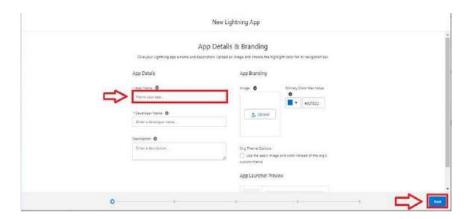

Well done you have reached close to your organizational requirement by creating the objects to store the organization's data. Making a database for an organization is just not enough to reach out the requirements, the task is how the users at the organization can access the objects you have created for them. As an Admin and Developer for the organization it's your duty to make sure every user of the organization is able to access the data modeling structure.

Create A Lightning App

Go to setup page >> search "app manager" in quick find >> select "app manager" >> click on New lightning App

- 2. Fill the app name in app details and branding as follow
 - a. App Name: Sales Automobile Using Salesforce CRM
 - b. Developer Name: this will auto populated
 - c. Description : Give a meaningful description
 - d. Image: optional (if you want to give any image you can otherwise not mandatory)
 - e. Primary color hex value : keep this default
- 3. Then click Next >> (App option page) keep it as default >> Next >> (Utility Items) keep it as default >> Next.

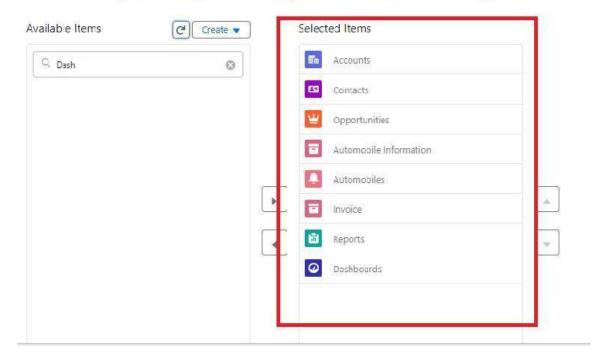

4. Add Navigation Items:

New Lightning App

Navigation Items

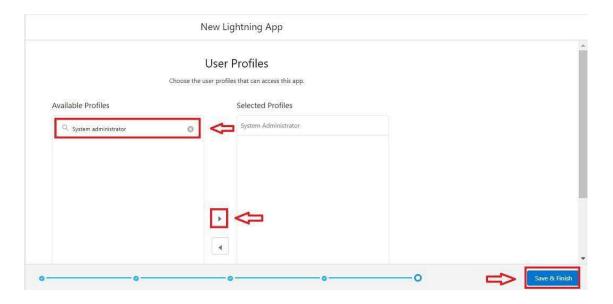

ey appear. Users can personalize the navigation to add or move items, but users can't remove or rename the items that you add. Some navigation bar when the app is viewed in a format that the item doesn't support.

5. Search the items in the search bar(Account,Contact,Opportunities,Automobile Information,Opportunity Automobile,Invoice,

Reports, Dashboard) from the search bar and move it using the arrow button ? Next.

Note: select asset the custom object which we have created in the previous activity.

6. Search profiles (System administrator) in the search bar >> click on the arrow button >> save & finish.

Fields & Relationships

When we talk about Salesforce, Fields represent the data stored in the columns of a relational database. It can hold any valuable information that you require for a specific object. Hence, the overall searching, deletion, and editing of the records become simpler and quicker. **Types of Fields**

- 1. Standard Fields
- 2. Custom Fields

Standard Fields:

As the name suggests, the Standard Fields are the predefined fields in Salesforce that perform a standard task. The main point is that you can't simply delete a Standard Field until it is a non-required standard field. Otherwise, users have the option to delete them at any point from the application freely. Moreover, we have some fields that you will find common in every Salesforce application. They are,

- >>Created By
- >> Owner
- >> Last Modified
- >> Field Made During object Creation

Custom Fields:

On the other side of the coin, Custom Fields are highly flexible, and users can change them according to requirements. Moreover, each organizer or company can use them if necessary. It means you need not always include them in the records, unlike Standard fields. Hence, the final decision depends on the user, and he can add/remove Custom Fields of any given form.

Use Case:

Now it's time for you to think out of the box for your organization. You have successfully created the database objects for the organization but now all eyes turn on you as you have to define what sort of information the objects store which you have created. As a life saver of your organization you come up with the idea of creating fields to store different types of data.

Creating Opportunity Master Detail Relationship Field In Opportunity AutoMobile Object

To create fields in an object:

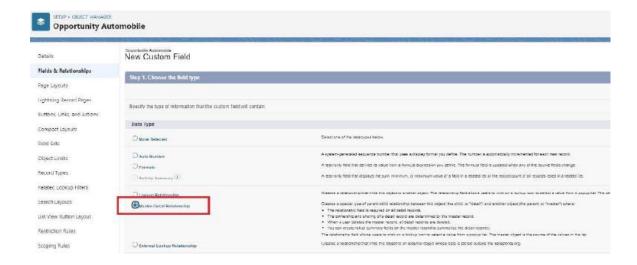

1. Go to setup >> click on Object Manager >> type object name(Opportunity Automobile) in quick find bar>> click on the object.

2. Now click on "Fields & Relationships" >> New

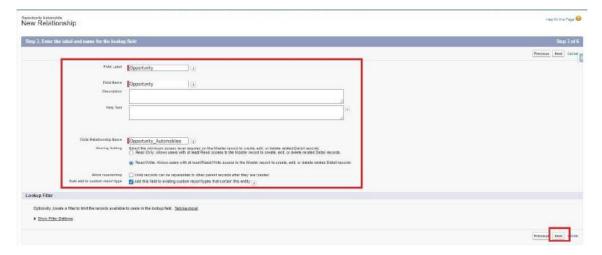

3. Select Data type as "Master Details Relationship".

4. Click on Next

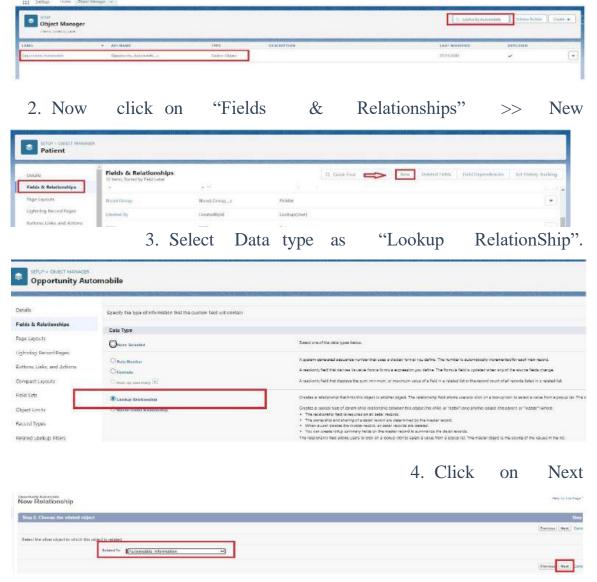

- 5. Fill the above as following:
- Field Label: gets auto Generated(Opportunity) Field Name : gets auto generated(Opportunity)
- Click on Next >> Next >> Save and new.

Creating The AutoMobile Information Lookup Field In Opportunity Automobile Object

To create fields in an object:

1. Go to setup >> click on Object Manager >> type object name(Opportunity Automobile) in quick find bar>> click on the object.

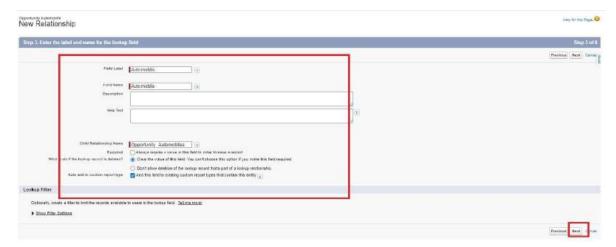

5. Fill the above as following:

· □ □ □ 2 0 ± 8

a. Field Label: Automobile

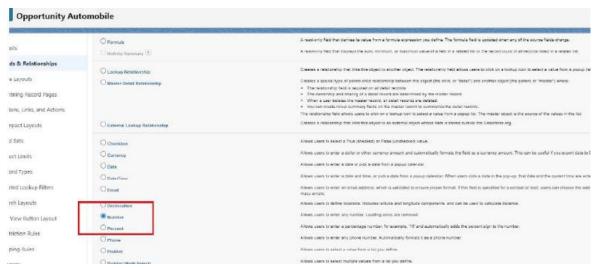

- b. Field Name: Automobile
- 6. Click on Next >> Next>> Save and new.

Creating Quantity Number Field In Opportunity Automobile Object

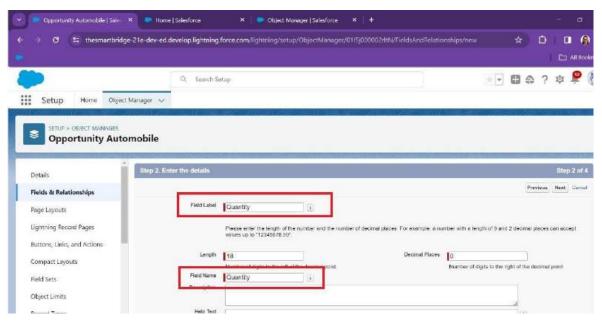

To create fields in an object:

- 1. Go to setup >> click on Object Manager >> type object name(Opportunity Automobile) in quick find bar >> click on the object.
- 2. Now click on "Fields & Relationships" >> New.
- 3. Select Data type as "Number" and click Next.

a. Field Label >> Quantity

b. Field Name >> Quantity

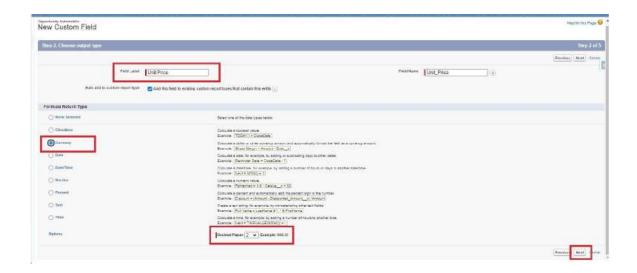

- 4. Check that Required Check box.
- 5. Click Next >> Next >> Save & New.

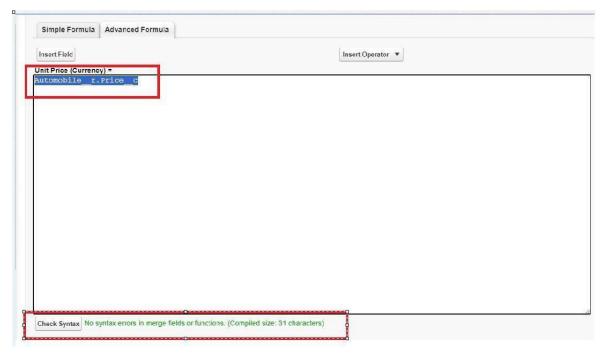

Creating Formula Field In Opportunity Automobile Object

To create fields in an object:

- 1. Go to setup >> click on Object Manager >> type object name(Opportunity Automobile) in quick find bar >> click on the object.
 - 1. Now click on "Fields & Relationships" >> New.
 - 2. Select Data type as "Formula" and click Next.
 - 3. Give Field Label and Field Name as "Unit Price" and select formula return type as "Currency" and change the decimal values to two and click next.

4. Under Advanced Formula write down the formula: Automobile__r.Price__c

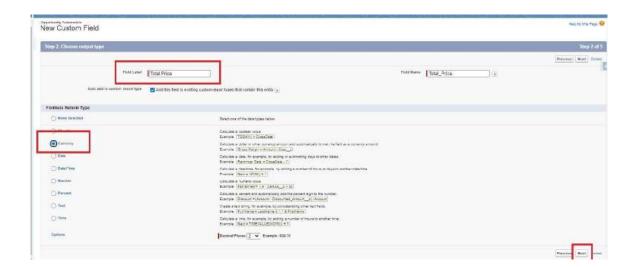

5. click "Check Syntax" and Next >> Next >> Save & New.

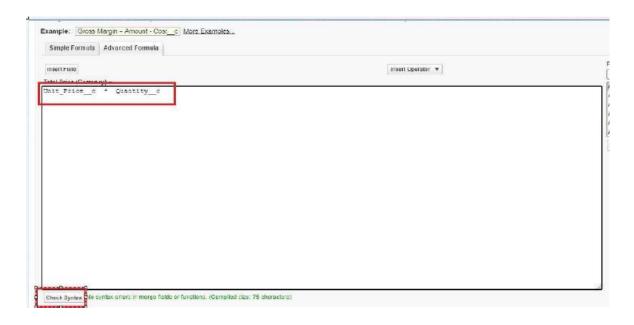

Creating The Formula Field In Opportunity Automobile Object

To create fields in an object:

- 1. Go to setup >> click on Object Manager >> type object name(Opportunity Automobile) in quick find bar >> click on the object.
 - 1. Now click on "Fields & Relationships" >> New.
 - 2. Select Data type as "Formula" and click Next.
 - 3. Give Field Label and Field Name as "Total Price" and select formula return type as "Currency" and change the decimal values to two and click next.

4. Under Advanced Formula write down the formula : Unit_Price____c * Quantity__c

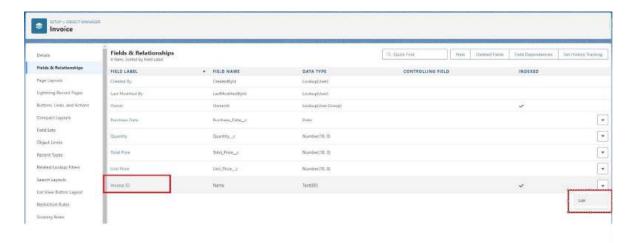

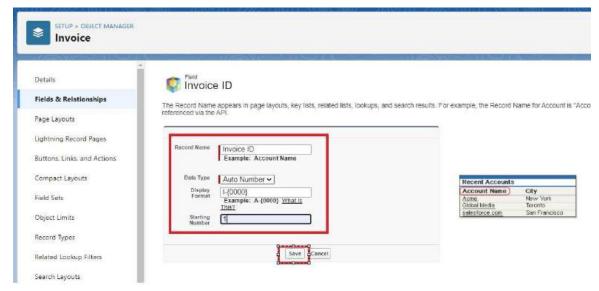

5. click "Check Syntax" and Next >> Next >> Save.

Updating Field In Invoice Object

To Update fields in an object:

- 1. Go to setup ? click on Object Manager ? type object name(Invoice) in quick find bar? click on the object.
- 2. Now click on "Fields & Relationships", Click on the edit of Invoice Id field.

- 3. Select Data type as "Auto Number" and click Next.
 - a. Display Format :- I-{0000}
 - b. StartingNumber:-
- 4. Click Save.

Creating Remaining Fields In Objects

Now create the remaining fields using the data types mentioned.

s.no	Object name	Fields	
		Field Name	Opportunity
1	Invoice	Data type	Master Detail relationship Object : Opportunity

Page Layouts

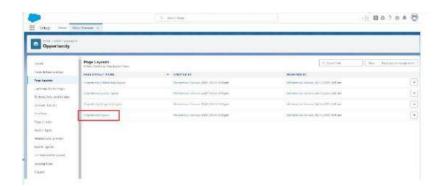

Page Layout in Salesforce allows us to customize the design and organize detail and edit pages of records in Salesforce. Page layouts can be used to control the appearance of fields, related lists, and custom links on standard and custom objects' detail and edit pages.

Use Case:

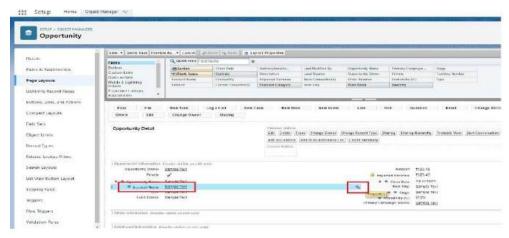

Hurray!! you have completed the data model structure for your organization but while looking at the detailed and edit pages it seems to be so clumsy, so decide to organize the page in a pleasant way for the sake of good and pleasant appearance and assemble all different kinds of information in different sections in order.

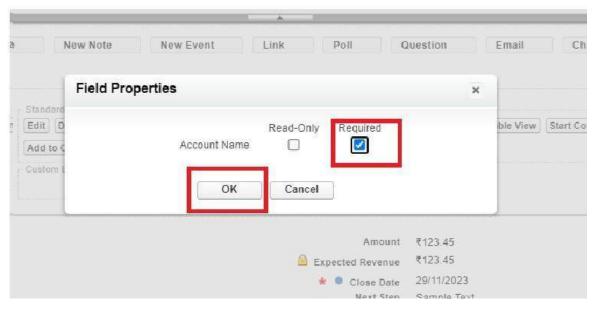

Edit The Page Layout For Opportunity Object

Step 1: Go to Setup >> Click on Object Manager >> On the search bar, select Opportunity Layout. You can notice Page Layouts on the left panel Step 2: Click on Page Layouts, Click on 'Opportunity Layouts'.

Step 3: In the Opportunity Detail Section, you can see various fields. Go on Account And Click on that Properties icon of Account name Field.

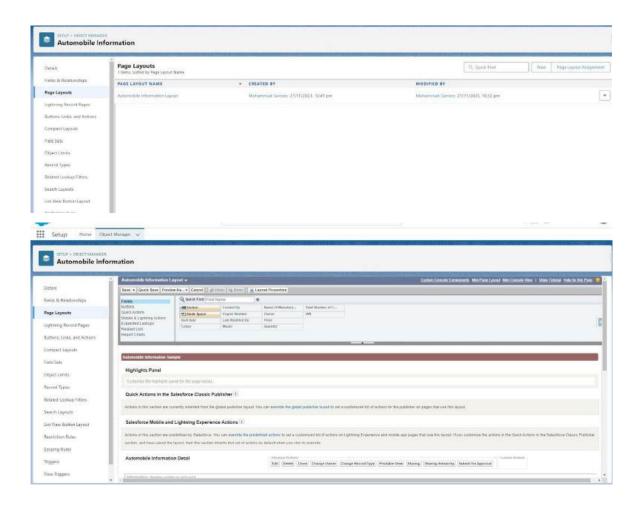

Step 4: check the Required box for Account name and click on Ok.

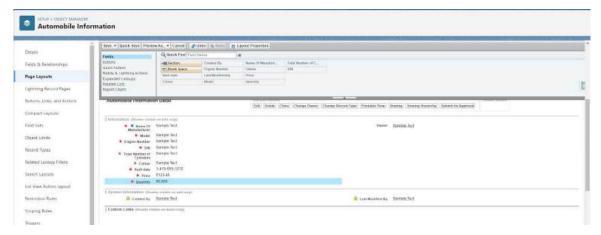

Step 5: Click on Save.

Edit The Page Layout For Automobiles Information

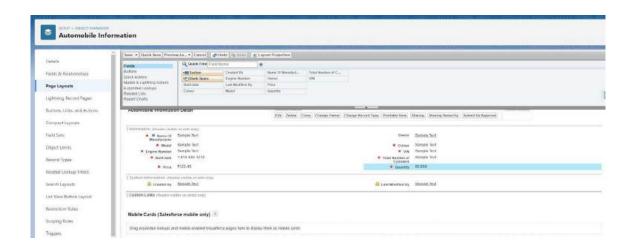

Step 1: Go to Setup >> Click on Object Manager >> On the search bar, select Automobile Information. You can notice Page Layouts on the left panel Step 2: Click on Page Layouts. Click on 'Automobile Information Layout'.

Step 3: Just Go for each one field of Automobile Information Object, Click on Gear Icon and mark as Required just as Done for Above Account Object. After required is done it will show the red color as given in below image.

Step 4 : Adjust the Fields as given below for A good looking view.

Step 5 : Click on Save.

Apex Trigger

Apex can be invoked by using triggers. Apex triggers enable you to perform custom actions before or after changes to Salesforce records, such as insertions, updates, or deletions.

A trigger is Apex code that executes before or after the following types of operations:

- insert
- update
- delete
- merge
- upsert
- undelete

For example, you can have a trigger run before an object's records are inserted into the database, after records have been deleted, or even after a record is restored from the Recycle Bin.

You can define triggers for top-level standard objects that support triggers, such as a Contact or an Account, some standard child objects, such as a CaseComment, and custom objects. To define a trigger, from the object management settings for the object whose triggers you want to access, go to Triggers.

There are primarily two types of Apex Triggers:

Before Trigger: This type of trigger in Salesforce is used either to update or validate the values of a record before they can be saved into the database. So, basically, the before trigger validates the record first and then saves it. Some

criteria or code can be set to check data before it gets ready to be inserted into the database.

After Trigger: This type of trigger in Salesforce is used to access the field values set by the system and affect any change in the record. In other words, the after trigger makes changes to the value from the data inserted in some other record.

Opportunity Automobile Quantity

UseCase: Whenever Opportunity Closed won Than Neglect / Minus the Quantity From Automobile Information on the Bases of Opportunity Automobile quantity.

- 1. Login to the respective trailhead account and navigate to the gear icon in the top right corner.
- 2. Click on the Developer console. Now you will see a new console window.
- 3. In the toolbar, you can see FILE. Click on it and navigate to new and create New apex class.
- 4. Name the class as "OpportunityHandlerClass".

Code:

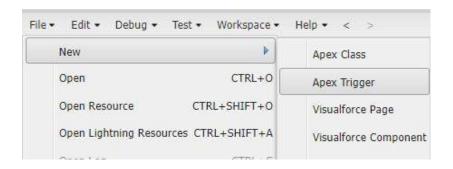

```
public class OpportunityHandlerClass {
  public
           static
                    void
                           opportunityAutomobileQuantity(List<Opportunity>
LstOpportunity, Map<Id,Opportunity> OldMapOpportunity){
                                                                  set<Id>
opportunityIds = new set<Id>();
                                for(Opportunity opp : LstOpportunity){
                               =='Closed
                                                 Won'
      if(opp.StageName
                                                               ){
opportunityIds.add(opp.Id);
      }
    }
    Map<Id,Opportunity_Automobile c> lstOpportunityAutomobile
                                                                    =new
Map<Id,Opportunity_Automobile c>([SELECT
                                                  Id.
                                                           Opportunity c,
Automobile c, Quantity c, Unit_Price c,
                                                  Total Price c
                                                                   FROM
Opportunity_Automobile_c Where Opportunity c IN: opportunityIds]);
    set<Id>
                  AutoInformationIds
                                                                set<Id>();
                                            =
                                                     new
for(Opportunity_Automobile c OppAuto: lstOpportunityAutomobile.values()){
if(OppAuto.Automobile c!= null){
        AutoInformationIds.add(OppAuto.Automobile c);
      }
    List<Automobile_Information c>
                                     lstAutomobileInfomation
     new List<Automobile_Information c>();
    Map<Id,Automobile_Information_c> MapAutomobileInformation = New
Map<Id,Automobile_Information c>([SELECT Quantity c, Price c, Name, Id
FROM Automobile_Information c WHERE Id IN: AutoInformationIds]);
```

```
For(Opportunity_Automobile___c
                                                  AutoOpp
lstOpportunityAutomobile.Values()){
      decimal num = 0;
      if(AutoOpp.Automobile c
MapAutomobileInformation.get(AutoOpp.Automobile c).Id
                                                                        &&
OldMapOpportunity.get(AutoOpp.Opportunity c).stagename != 'Closed Won'){
num =
MapAutomobileInformation.get(AutoOpp.Automobile___c).Quantity__c-
AutoOpp.Quantity c;
        MapAutomobileInformation.get(AutoOpp.Automobile___c).quantity__c
= num;
lstAutomobileInformation.add(MapAutomobileInformation.get(AutoOpp.Automobi
le__c));
    If(!lstAutomobileInfomation.IsEmpty()){
update lstAutomobileInfomation;
    }
```

Trigger Handler:

How to create a new trigger:

- 1. While still in the account, navigate to the gear icon in the top right corner.
- 2. Click on developer console and you will be navigated to a new console window.
- 3. Click on the File menu in the toolbar, and click on new? Trigger.
- 4. Enter the trigger name and the object to be triggered.
- 5. Name: OpportunityTrigger
- 6. sObject : Opportunity

Syntax For creating trigger:

The syntax for creating trigger is:

Trigger [trigger name] on [object name](Before/After event){
//block of code

In this project, trigger is called whenever the particular records sum exceed the threshold i.e minimum business requirement value. Then the code in the trigger will get executed.

1. Trigger for Opportunity Object.

```
File - Edit - Debug - Test - Workspace - Help - < Deportunity/Andientender.apxc - Opportunity/Andientender.apxc - Opportunity/Andientender.apxc - Opportunity/Andientender.apxc - Opportunity/Andientender.apxc - Opportunity/Iniquer.apxc -
```

trigger OpportunityTrigger on Opportunity (before update, After Update) {
if(trigger.isbefore && trigger.isUpdate){

Opportunity Handler Class. opportunity Automobile Quantity (trigger.new, trigger.old Map);

} }

Opportunity-Automobile Error

UseCase: If Quantity of Automobile is Zero or Less than The Quantity from The Opportunity-Automobile Than Throw an error.

Login to the respective trailhead account and navigate to the gear icon in the top right corner.

- 1. Click on the Developer console. Now you will see a new console window.
- 2. In the toolbar, you can see FILE. Click on it and navigate to new and create New apex class.

3. Name the class as "OpportunityAutomobileHandler".

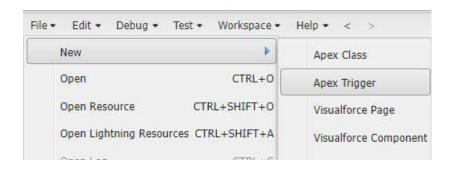

```
Code:
public class OpportunityAutomobileHandler {
                                                                     void
  public
                                    static
quantityErrorOnAutomobileInformation(List<Opportunity_Automobile c>
lstOpportunityAutomobile){
    set<Id> AutomobileIds = new Set<Id>();
                                       OppAutomobile
    For(Opportunity Automobile c
lstOpportunityAutomobile){
      if(oppAutomobile.Automobile c!= null){
        AutomobileIds.add(oppAutomobile.Automobile c);
    Map<Id,Automobile_Information c> lstAutomobileInformation
map<Id,Automobile_Information c>([SELECT Id, CreatedById, Quantity c, Price
c FROM Automobile_Information c WHERE Id IN: AutomobileIds]);
    For(Opportunity_Automobile_c
                                       OppAutomobile
lstOpportunityAutomobile){
      If(OppAutomobile__c ==
lstAutomobileInformation.get(OppAutomobile.Automobile c).Id
                                                              &&
lstAutomobileInformation.get(OppAutomobile.Automobile c).Quantity c
OppAutomobile.Quantity c){
```

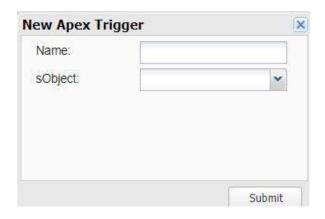

```
OppAutomobile.addError('the Number of Automobile u want are not
Available !! the Automobile are Available Count is ' +
lstAutomobileInformation.get(OppAutomobile.Automobile__c).Quantity__c);
}
}
```

Trigger Handler:

How to create a new trigger:

- 1. While still in the trailhead account, navigate to the gear icon in the top right corner.
- 2. Click on developer console and you will be navigated to a new console window.
- 3. Click on the File menu in the toolbar, and click on new? Trigger.
- 4. Enter the trigger name and the object to be triggered.
- 5. Name: OpportunityAutoMobileTrigger
- 6. sObject : Opportunity_Automobile__c

Trigger:

Handler for the Opportunity_Automobile___c Object

Code: trigger OpportunityAutoMobileTrigger on Opportunity_Automobile_c (before insert, before Update) { if(trigger.isbefore && trigger.isinsert || trigger.isupdate) {

OpportunityAutomobileHandler.quantityErrorOnAutomobileInformation(trigger.n ew);
}

Invoice Creation Trigger

UseCase: Whenever an opportunity is Closed won then create the Invoice on the Bases of Opportunity Automobile Data.

Login to the respective trailhead account and navigate to the gear icon in the top right corner.

- 1. Click on the Developer console. Now you will see a new console window.
- 2. In the toolbar, you can see FILE. Click on it and navigate to new and create New apex class.
- 3. Name the class as "InvoiceCreation".

```
- mail: Class [amalize[rention]

- pails static vaid opportunity(tissebantinoutsementerent(costopertunity) interpretating opportunity) and opportunity opportunity
```

Code:

```
InvoiceCreation
public
       class
                                                     public
                                                              static
                                                                      void
OpportunityClosedwonInvoiceGeneration(List<Opportunity>
                                                             1stOpportunity,
                                          set<Id> oppIds = new Set<Id>();
Map<Id,Opportunity>OldMapOpportunity){
For(Opportunity opp : lstOpportunity){
      if(Opp.StageName
                                           'Closed
                                                          Won'
                                                                       &&
                                                          opp.StageName){
OldMapOpportunity.get(opp.Id).StageName
                                                !=
oppIds.add(opp.Id);
    List<Opportunity_Automobile c> lstOpportunityAutomobile = [SELECT
Unit_Price_c, Total_Price_c, Automobile_c, Quantity_c, Opportunity_c, Id
FROM Opportunity_Automobile c WHERE Opportunity c IN: oppIds];
```

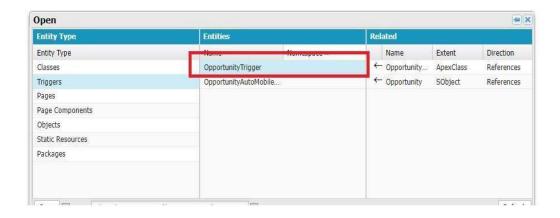

```
List<Invoice__c> lstInvoice = new List<Invoice__c>();
For(Opportunity_Automobile__c oppAuto: lstOpportunityAutomobile){
    Invoice__c i = new Invoice__c();
    i.Quantity__c = oppAuto.Quantity__c;
    i.Unit_Price__c = oppAuto.Unit_Price__c;
    i.Total_Price__c = oppAuto.Total_Price__c;
    i.Purchase_Date__c = date.today();
    i.Opportunity__c = oppAuto.Opportunity__c;

lstInvoice.add(i);
    }
    if(!lstInvoice.isempty()){
    insert lstInvoice;
    }
}
```

Trigger Handler:

For this class we don't need to create any trigger, we will call this Code in "Opportunity Trigger".

- 1. Go on files and click on open.
- 2. Click on triggers.
- 3. Double click on OpportunityTrigger.

Trigger:

```
trigger OpportunityTrigger on Opportunity (before update, After Update) {
   if(trigger.isbefore && trigger.isUpdate){
        OpportunityHandlerClass.opportunityAutomobileQuantity(trigger.new,
   trigger.oldMap);
   }
   IF(trigger.isafter && trigger.isupdate){
        InvoiceCreation.OpportunityClosedwonInvoiceGeneration(trigger.new,
   trigger.oldMap);
   }
}
```

Check Contact Role

UseCase: Whenever an opportunity is Going to Closed won then check it has the contact role or Not.

Login to the respective trailhead account and navigate to the gear icon in the top right corner.

- 1. Click on the Developer console. Now you will see a new console window.
- 2. In the toolbar, you can see FILE. Click on it and navigate to new and create New apex class.
- 3. Name the class as "ContactRoleCheck".

Trigger:

```
public class ContactRoleCheck { public
                                         static void
CheckcontactRoleonOpportunity(List<Opportunity> lstOpportunity,
Map<Id,Opportunity>OldMapOpportunity){
    List<OpportunityContactRole> lstContactRole
                                                       [SELECT
                                                                   Id
                                                                        From
OpportunityContactRole
                                 WHERE
                                                  OpportunityId
                                                                         IN:
OldMapOpportunity.keyset()];
    For(Opportunity opp : lstOpportunity){
      if(Opp.StageName
                                            'Closed
                                                            Won'
                                                                         &&
OldMapOpportunity.get(opp.Id).StageName != opp.StageName){
         If(lstContactRole.isempty()){
```

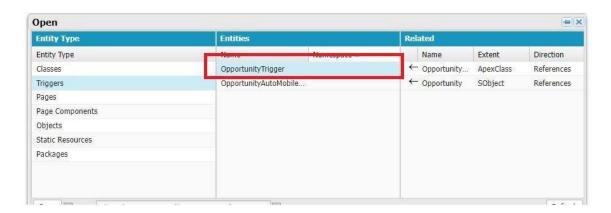

```
opp.adderror('Please add contact Role on opportunity whenever Opportunity is Going to Closed Won.');

}
}
}
```

Trigger Handler:

For this class we don't need to create any trigger, we will call this Code in "Opportunity Trigger".

- 1. Go on files and click on open.
- 2. Click on triggers.
- 3. Double click on OpportunityTrigger.

Trigger Code:

```
code Coverage: None - API Version 59 v

1 * trigger OpportunityTrigger on Opportunity (before update, After Update) {
    if(trigger.isbefore && trigger.isUpdate) {
        OpportunityHandlerClass.opportunityAutomobileQuantity(trigger.new, trigger.oldMap);
        ContactRoleCheck.CheckcontactRoleonOpportunity(trigger.new, trigger.oldMap);
}

6 * IF(trigger.isafter && trigger.isupdate) {
        InvoiceCreation.OpportunityClosedwonInvoiceGeneration(trigger.new, trigger.oldMap);
    }
}
```

Trigger:

trigger OpportunityTrigger on Opportunity (before update, After Update) {
if(trigger.isbefore && trigger.isUpdate){

OpportunityHandlerClass.opportunityAutomobileQuantity(trigger.new, trigger.oldMap);

```
ContactRoleCheck.CheckcontactRoleonOpportunity(trigger.new, trigger.oldMap);

}

IF(trigger.isafter && trigger.isupdate){

InvoiceCreation.OpportunityClosedwonInvoiceGeneration(trigger.new, trigger.oldMap);

}
```

LWC Component:

Create Apex Class To Get Invoices

- 1. Login to the respective account and navigate to the gear icon in the top right corner.
- 2. Click on the Developer console.
- 3. Now you will see a new console window.
- 4. In the toolbar, you can see FILE.
- 5. Click on it and navigate to new and create New apex class.
- 6. Name the class as "OpportunityInvoiceswithLWC".

Code:

Install Salesforce CLI

The Salesforce CLI is a powerful command line interface that simplifies development and build automation when working with your Salesforce org.

Download and install Salesforce CLI

To confirm that the Salesforce CLI is installed and working correctly, you can open a command prompt and type sfdx. This will display the version number of the Salesforce CLI that is currently installed on your system.

```
C:\Users\navee>sfdx
Salesforce CLI
VERSION
  sfdx-cli/7.182.1 win32-x64 node-v18.12.1
USAGE
  $ sfdx [COMMAND]
TOPICS
  alias
           manage username aliases
  auth
          authorize an org for use with the Salesforce CLI
           configure the Salesforce CLI
  config
          tools for the Salesforce developer
  force
  info
           access cli info from the command line
  plugins add/remove/create CLI plug-ins
  version
                                                  codekiat.com
```

Install Microsoft VS Code

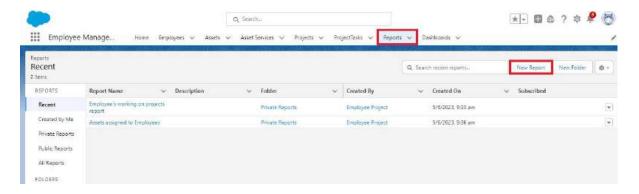

VS Code, or Visual Studio Code, is a free, open-source code editor developed by Microsoft. It is a lightweight, cross-platform code editor that provides features such as debugging, Git integration, and support for a wide range of programming languages.

Download the version of the software that is compatible with your operating system and install it. The following instructions are for Windows OS. Other operating systems may have slightly different steps.

OUTPUT:

Create Report on Opportunity

- 1. Go to the app >> click on the reports tab
- 2. Click New Report.

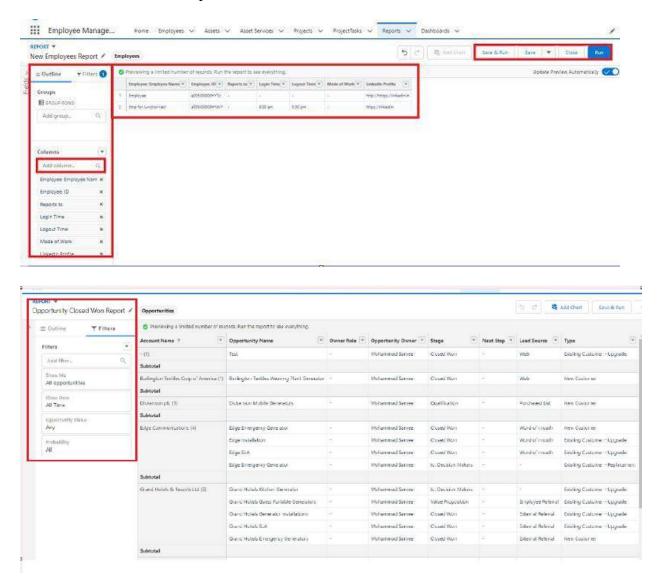

3. Select report type from category or from report type panel or from search panel >> click on start report.

4. Customize your report

• Add fields from left pane as shown below

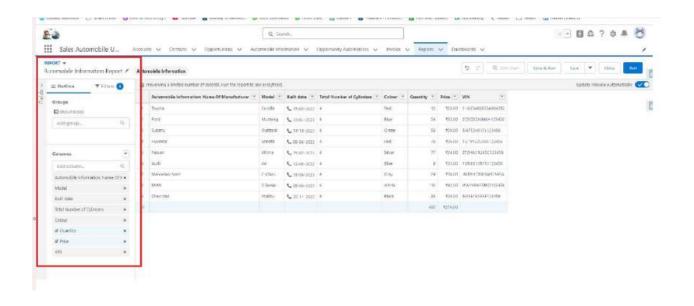

Add the Above Filter as well.

5. Save or run it.

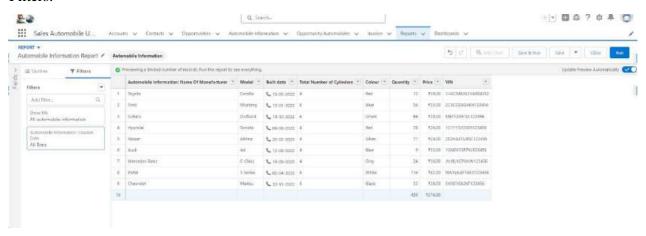

Note: Reports may get varied from the above pictures as the data might be different.

Create Report on Automobile Information

1. Create a report with a report type: "Automobile Information".

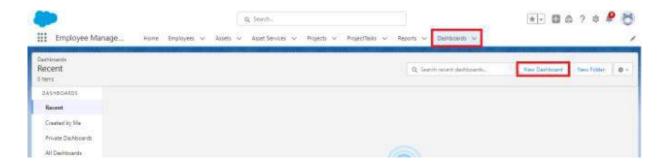

Filters:-

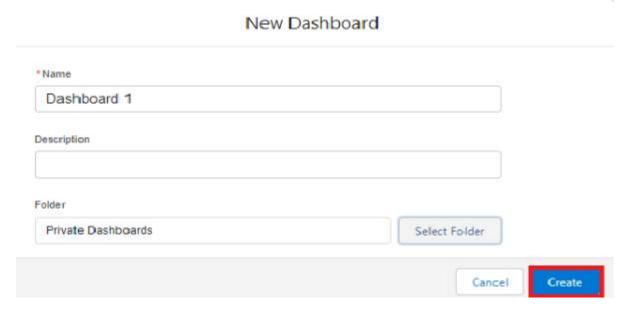

2. Create a Report by using "Opportunities with Opportunity Automobiles and Automobile" Report Type.

reate Dashboard

1. Go to the app? click on the Dashboards tabs.

2. Give a Name and click on Create.

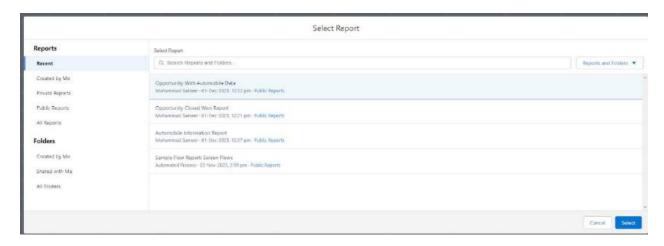

Name: Automobile Sales

3. Select add component.

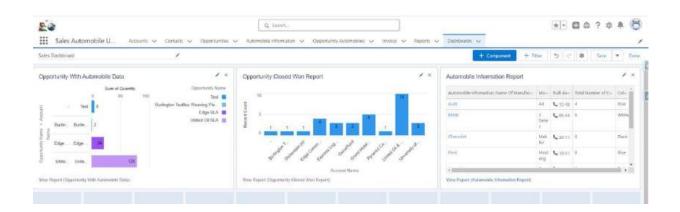

4. Select a Report and click on select.

5. Click Add then click on Save and then click on Done.

The Created Dashboard will look like this.

Conclusion:

The integration of CRM into the automotive industry has proven to be a strategic move that yields significant benefits. By streamlining operations, enhancing customer relationships, and driving sales, CRM empowers automotive businesses to thrive in an increasingly competitive market.

Key advantages include:

- **Improved Customer Experience:** Personalized interactions, efficient issue resolution, and proactive service contribute to enhanced customer satisfaction and loyalty.
- Optimized Sales Processes: CRM tools streamline sales funnels, track leads effectively, and facilitate efficient deal closures.
- Enhanced Marketing Effectiveness: Targeted campaigns, data-driven insights, and precise customer segmentation lead to higher conversion rates and ROI.
- Efficient Service Management: Streamlined service scheduling, optimized inventory management, and improved technician productivity contribute to superior after-sales service.
- **Data-Driven Decision Making:** Comprehensive data analysis enables informed business decisions, strategic planning, and risk mitigation.

Future Enhancements

To maximize the potential of CRM in the automotive industry, future enhancements should focus on the following areas:

- **AI-Powered Insights:** Leveraging AI to analyze vast amounts of customer data to identify emerging trends, predict customer behavior, and provide proactive recommendations.
- Omnichannel Integration: Seamlessly integrating CRM with various channels (e.g., websites, mobile apps, social media) to deliver consistent customer experiences across all touchpoints.
- **Predictive Analytics:** Utilizing advanced analytics to forecast future trends, identify potential risks, and optimize resource allocation.
- **IoT Integration:** Connecting CRM with IoT devices to gather real-time vehicle data, enabling predictive maintenance, personalized offers, and enhanced customer service.
- **Blockchain Technology:** Implementing blockchain for secure and transparent data sharing, particularly in areas like vehicle history, maintenance records, and supply chain management.

By embracing these future enhancements, automotive businesses can further elevate customer experiences, streamline operations, and gain a competitive edge in the evolving automotive landscape.
